

The Simulation You Call “I”

The Architecture of Consciousness,
Computation, and the Cosmos

A detailed, computer-generated image of a neural network. It features numerous thin, branching neurons in shades of grey and white, some of which are highlighted with bright orange and yellow lights, suggesting active synapses or firing neurons. The background is a deep, dark purple, making the glowing neurons stand out. The overall effect is organic and complex, resembling both a microscopic view of brain tissue and a futuristic digital architecture.
